# Overview

## What is it?

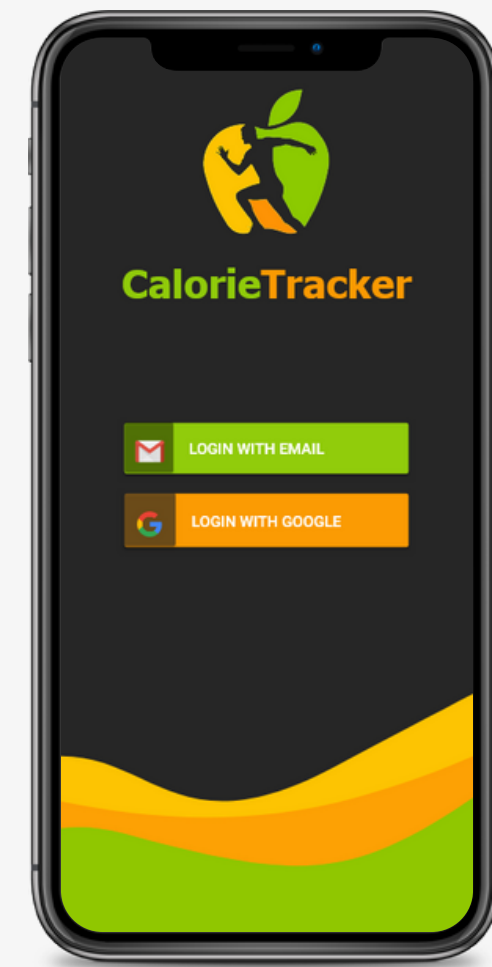

CalorieTracker is an app used to keep track of users' diets. The maximum calorie intake per day is calculated using the BMI of the User. The calories consumed per day will be tracked when the user scans the food item.

CalorieTracker also gives the suggestion based on the user's calorie intake and suggests the healthy activities which will be conducted in the user's vicinity.

# Features

- Social Sign-On
- Calculate BMI
- Food detection using Vision API
- Pedometer
- Health Report
- Display nearby health activities

# Tech Stack

- **Front End**
  - Two Mobile – iOS and Android
  - Social Login
- **Backend and Hosting**
  - Firebase

# Wireframes
